

TE PARI

DOCKING EQUIPMENT

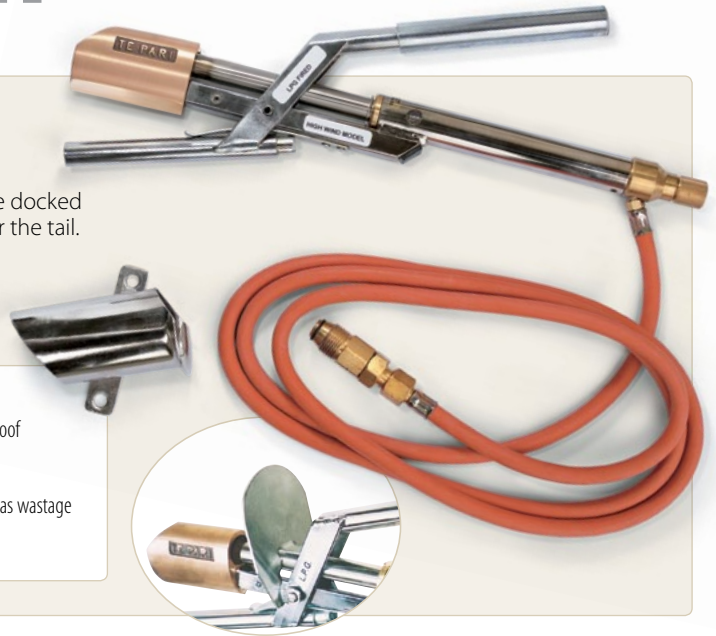

Te Pari standard and High wind model docking irons.

The Te Pari scissor action docking iron enables lambs to be docked almost anywhere, without the need for a baseboard under the tail.

Surgical docking is less stressful to lambs, and searing leaves a clean and sealed wound that reduces lamb losses due to infection and fly strike.

Features

- Highwind model features large jet and burner system making it virtually wind proof
- Copper Alloy searing head for swift heat up, heat retention and longer life
- A holder that deflects spent gas back over cutting head preventing cooling and gas wastage
- Optional Heatshield (shown here in the inset image)

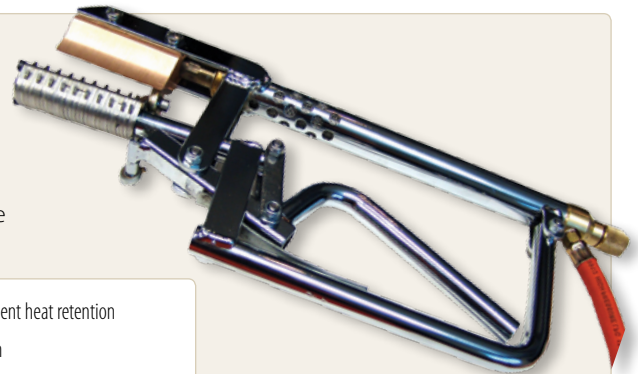

Te Pari Patesco docking iron

Based on the proven standard docking iron the Te Pari Patesco docking iron treats the end of the tail in such a way the upper surface of the end of the tail heals with bare skin rather than wool. The bare area on the top of the end of the tail is of sufficient size that the wool will not grow long enough to fall over the end of the docked tail and allow dags to form.

Features

- Patented rotating anvil system stretches wool during docking process
- Improved leverage and balance
- Copper searing head for excellent heat retention
- Unique handle linkage system
- LPG fired

Te Pari docking cradle

Its centre pivoting design means when lamb is released, it automatically lands front feet first and the cradle resets. Adjustable cradle tension and all steel parts are zinc plated. Very effective and very popular.

Benefits

- Fast loading
- Mounts on fence or portable yard panel
- Adjustable legs

ROLLMASTER DOCKING CHUTES

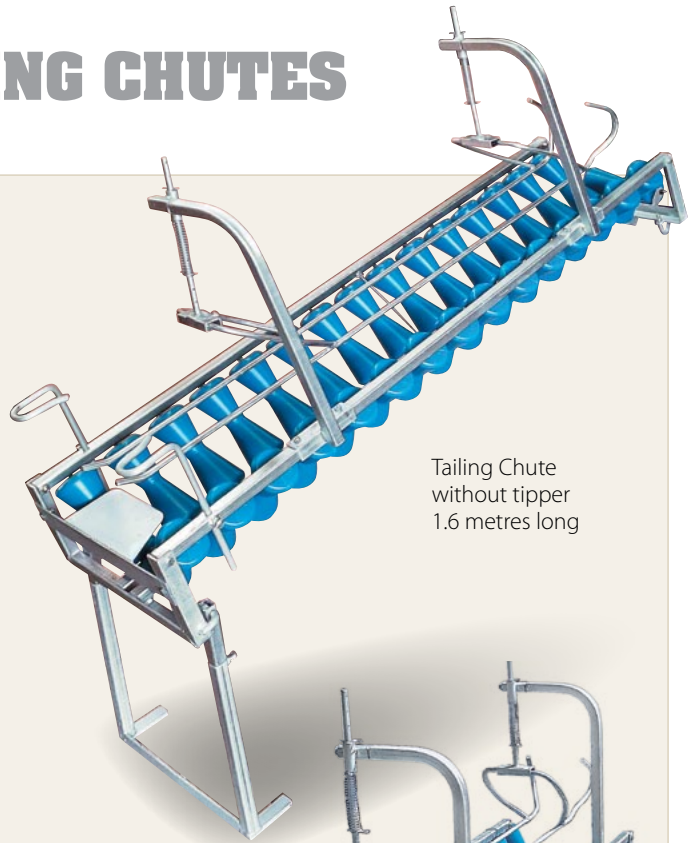

Tailing chute and optional tipper

A fast and efficient system for marking and tailing lambs. The lamb tails are presented in the ideal position for docking. The optional tipper unit allows the lambs to be tipped out of the chute rather than pulled and dropped.

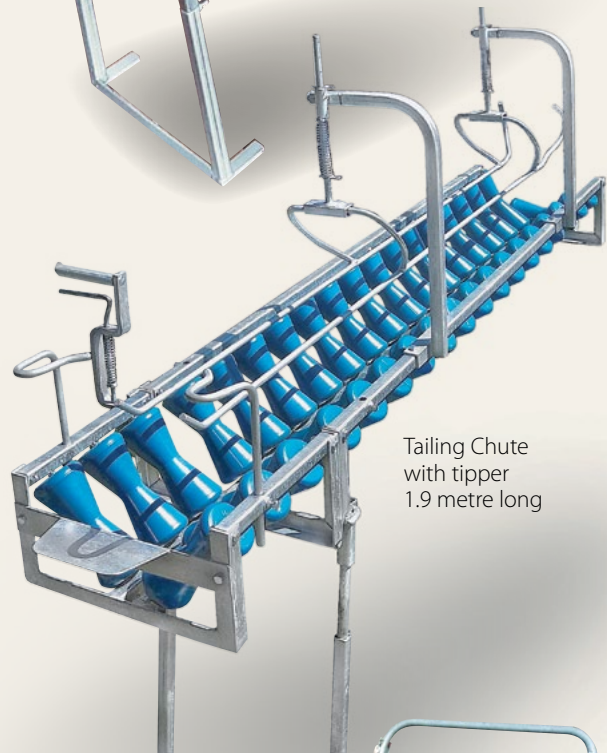

The Tailing Chute has an overall length of 1.6 metres with the addition of the optional tipper 300 mm is added to the length making it 1.9 metres.

Benefits

- Portable, easy to use and maintenance free
- Patented vee-roller configuration to ensure the safe, smooth and speedy throughput of lambs with less drag and less stress
- Lambs from 2 weeks to 3 months are handled easily with quick adjustment for different sized animals
- Loading and unloading is simple with 4-5 lambs able to be worked on by multiple operators if desired
- Ideal for drenching, ear marking, tailing, docking, castration and inoculation
- Easy to set up, fold down and transport around the farm
- Manufactured with electroplated steel and heavy duty polyethylene rollers providing strong, durable construction and finish for long, trouble free use
- Proven performance with over 20 years in market place

with tipper
1.9 metre long

Te Pari Fadge holder

Easy to transport and store, this fadge holder has a galvanised frame for long life. The high back model pictured here, which takes advantage of the large flaps on capless packs to increase the mouth size and holding capacity, is ideal for wool classing when wool is being thrown into a fadge. The holder has optional castors and a unique pack-retaining clip for the capless packs.

Features

- Folds flat for instant storage
- Unique pack retaining clip
- Galvanised
- Optional Castors
