

COMMANDassurance

Time Saved. Quality Assured.

Don't allow a lack of visibility in the properties of your fresh concrete cost you time, money, and peace of mind any longer. COMMANDassurance offers real-time and historical data on the concrete properties of each ready-mix delivery from loading through placement, providing insight that's needed to ensure quality, avert risk and enhance production accuracy and delivery efficiency. COMMANDassurance ensures the quality of your concrete and is paid for by gains in time, efficiency, and material savings.

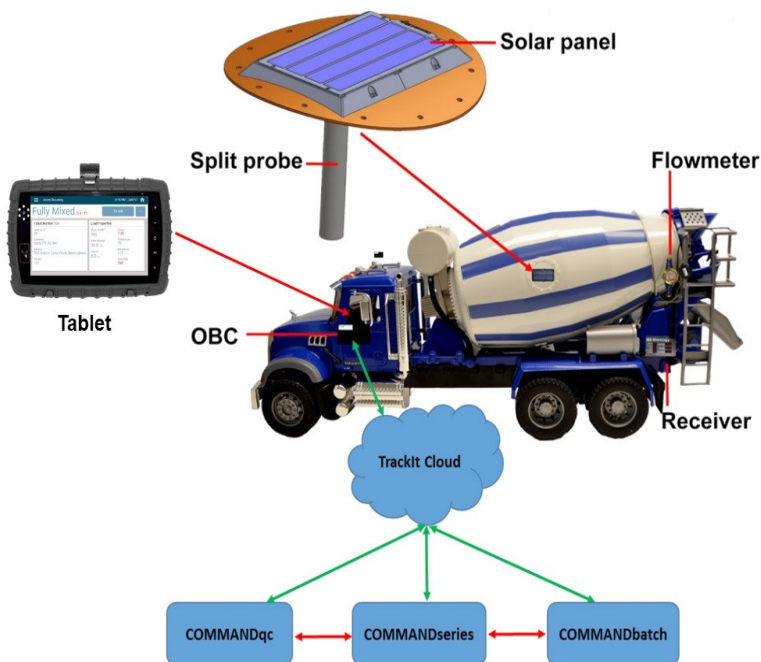

Visibility From Load to Pour

- Assure quality and job specification requirements are met
- Enable proactive adjustments to future production cycles, reducing mix overdesign and eliminating rejected loads
- Improve truck and driver utilization and overall delivery costs
- Deliver significant safety improvements

Maintain with Ease

COMMANDassurance delivers high value with an approach that requires minimal hardware to be deployed and maintained across your ready-mix fleet. A simplistic design consisting of probe, solar panel, and control panel/tablet options ensure you do not need an entire staff to maintain and troubleshoot system hardware as you scale across your fleet.

Integration Is Key

COMMANDassurance is unique in its ability to deliver value across your organization through integration with:

- COMMANDbatch – Realtime feedback to make adjustments to the next production cycle
- COMMANDseries – Dispatch notifications and realtime feedback
- COMMANDqc – Historical analysis to adjust mix designs and material usages
- TrackIt – Realtime feedback to Drivers and Dispatch
