

your ERP persona is...

# The Implementor

Implementation is where the rubber finally meets the road in your ERP adventure. You've done your research and defined your goals. You've chosen your solutions and mapped your processes. You've built strong relationships with vendors and partners. Now it's time to get to work designing, developing, testing, and deploying your solution. Piece by piece, your hard work will come to fruition and the new vision for your company's operations and productivity will become reality.

## Tips & Guidance

1

### Dive in to Design

Use business case modeling to connect the dots between your objectives and the solutions and services you have selected.

### Test, Test, Test

A good testing strategy can head off many possible software and workflow issues that might come up. Test everything.

### Document Everything

Implementing new enterprise software is a big change for an organization. Be sure to document new processes and solutions in detail for future reference.

### Invest in Training

Spend adequate time training end-users to ensure that everyone knows exactly how to perform their jobs using the new system.

### Manage the Rollout

Change is not always easy to handle. Be prepared to support users and make adjustments after the system goes live.
