

The Evaluator

You've done your research and now it's time to make some big decisions for your business. Which ERP solution will you choose? Armed with your clear business objectives, the information you've researched, and a map of the vendor marketplace, your mission is to identify which solution and provider is the best fit for your business. It won't be easy to cut through the marketing hype, but through a lot of focus and a little objectivity you can narrow down the options and find the right solution for your needs.

Tips & Guidance

Follow Your RFP

A lot of time and effort go into creating a good RFP/RFI document. Follow the path you've laid out and make sure all points are addressed.

Check the News

Review reputable sources to see which solutions and providers are making the news. Who shows the leadership and innovation that will bring you long-term success?

Consider Delivery Methods

You'll need to figure out how you want to use your ERP: in the Cloud, Hosted, SaaS, or On-Premise? Consider short- and long-term goals.

Read Case Studies

There is much to learn others' experiences. Read some case studies to learn how solution features and services impact implementations.

Measure Up

Compare solutions side-by-side and weigh the pros and cons as objectively as possible. Don't let emotional decisions or effective vendor marketing distract you from your goals.
