Developed Specifically for Liquid and Semi-Liquid Applications

Hard-to-Hold Liquids Are No Problem for the Liquipak®

OVERVIEW

- ✓ Liquipak® fibre drums feature a full laminated plastic interior surface using a heat-sealed seam, caulked bottom juncture, and plastic or steel cover.
- ✓ The inside ply of every Liquipak® incorporates a plastic lining system securely bonded to the drum sidewall and bottom as an integrated laminate.
- ✓ Corrosion-resistant alternatives are available for top and bottom chime (as well as steel covers).
- ✓ The Liquipak® is available with Greif Weatherpak® construction for added resistance to exterior wet and humid storage conditions.
- ✓ Liquipak® drums are compliant with NMFC requirements for up to 700 lbs. (317.5 kg) of liquid material.
- ✓ Drum body exteriors can be decorated with company logos, product information and/or trademarks.

Optional Greif Weatherpak® high-moisture barrier consists of adhesive built into each ply in the sidewall. Moisture resistance does not depend on exterior coating, and resistance to water vapor transmission approaches that of aluminum for product protection.
