

WINE & SPIRITS GUIDE

Offering premium stocks for the wine and spirits market. Materials are available in elegant textures and diverse colors and provide high quality performance against wet, cold, ice bucket and humid environments.

The portfolio includes embossed, felt marked, pearlescent, laid, uncoated, coated, waterproof, alternative fibers and recycled content papers.

Materials are available in roll and sheet formats.

HIGH TECH TREATMENTS

ULTRA WS™

Ultra WS™ treatment is particularly suitable for white, rose and sparkling wines because it prevents the formation of wrinkles and the deformation of the label when placed in ice buckets and in the event of temperature changes. Furthermore, it increases the adhesion of the label on glass surfaces in damp conditions.

H+OPACITY™

H+Opacity™ technology is especially designed by Fedrigoni's paper masters to preserve the label's initial opacity and maintain a premium brand image after ice bucket immersion. Added directly to the paper pulp, the high opacity treatment is the perfect solution, not only for white, rose and sparkling wines, but also for any premium product that calls for a high performing label and needs to withstand contact with water or ice.

X-DRY™

X-Dry™ waterproof technology has been especially designed in order to maintain a premium brand image after being exposed to extreme temperature changes and ice bucket immersion. With X-Dry™ technology, Manter's premium papers preserve the initial label opacity and integrity, halting deformations, wrinkles and bubbles.

WATERPROOF

Waterproof technology is a special waterproof coating applied on both sides of the facestock that prevents the formation of wrinkles and bubbles and label deformation. It preserves the initial label opacity and integrity, without the addition of any protective film, even after enduring extreme temperature changes and ice bucket immersion for up to 24 hours. This technology makes papers perform like films in wet conditions.

ADHESIVES

AP 1300

Permanent water-base UV acrylic featuring excellent dimensional stability, wet opacity and resistance to the fridge test. Excellent transformability characteristics. Recommended for bottleneck labels and small diameter bottles in combination with low stiffness facestocks.

SH 6020 PLUS

Permanent water based acrylic adhesive. Especially designed for glass containers. It provides good adhesion in wet conditions and in case of temperature fluctuations. It is repositionable within 1 hour from label application.

SH 9020

Water-base permanent acrylic adhesive. Especially designed for glass containers. It provides good adhesion in case of temperature fluctuations and excellent resistance when in contact with water or ice. It is not repositionable.
