

# LedgeGuard™

## Elevated Access Protection

### Meets OSHA Requirements

1910.29(b) and 1926.502(b)

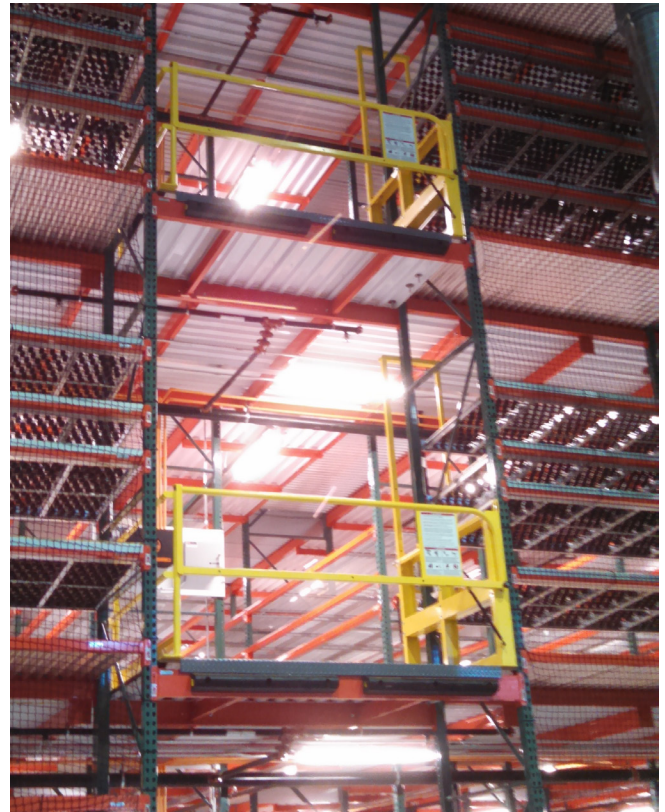

LedgeGuard is a warehouse guardrail system that protects elevated access points for material loading and unloading. Easy-to-use, easy-to-install. Garlock warehouse guardrails protect without affecting productivity. The two-gate system means one gate is always closed and OSHA compliant fall protection is in place.

### Features

A complete warehouse guardrail system that integrates with elevated loading area, such as mezzanines, where access from below is required for forklifts and at landing height. Create a safe zone for employees without sacrificing productivity with LedgeGuard safety gate and warehouse guardrail system. With the unique dual gate system, when the inner gate closes the outer gate opens allowing access from below. Once the pallet has been placed in the loading zone, the inner gate can be opened, automatically closing the outer gate to allow safe access to the pallet.

- Prevents falls from elevated access loading points while transferring material loads.
- Counteracting gates & rail sections create a safe zone for loading/unloading areas
- When inside gate is opened by the worker, outside gate automatically closes.

## Why Choose Garlock Safety Systems™?

- Rigorously Tested to Exceed OSHA & ANSI Standards
- Full Passive Fall Prevention Portfolio
- In-House Engineering
- Custom Engineered Products Available

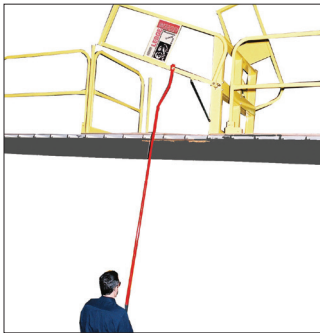

# Specifications

Railing Height	42"
Safe Zone Depth	65" to keep operator back from unloading process.
Opening Width	Standard= 57" Standard size requires 77" x 65" footprint. 82" clearance height
Gates	70" and wider require additional damper.

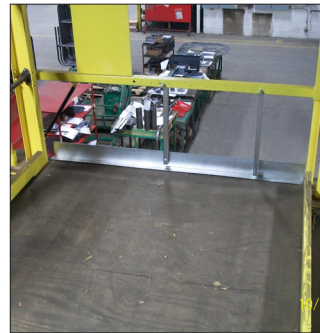

# Options

Multiple color options available  
Visit [www.ralcolor.com](http://www.ralcolor.com) for color choices

### Ground Pole

The ground pole allows forklift operator from ground level to open outside gate.

### Toe Boards

Add toe boards for protection from debris being kicked.
