Software Asset Manager Implementation

Software Asset Manager is an on-premise application that enables you to easily track and manage your installed AVEVA software and licenses running at your site(s). It identifies and allows single-click downloads of relevant upgrades, service packs and patches that you can then easily apply when needed. It also identifies and prioritizes critical Microsoft security updates that address known vulnerabilities and keep your software secure.

$8,500

This installation, licensing and training bundle provides you with a turn-key implementation of Software Asset Manager and automated inventory of your installed AVEVA software and licenses significantly reducing your overall maintenance effort and saving you time. You will get a comprehensive listing of all installed licenses for tracking and compliance purposes. You will also get the ability to view your installed software and its life cycle status as well as all relevant software updates, patches and service packs, so you can keep your software current. With the included training session, you will be able to confidently use the application to effectively manage your installed software.

What's Included

- An initial project call to discuss the scope and ensure all required prerequisites are known
- A local installation of Software Asset Manager at your chosen physical site, on your designated node
- Configuration of the tool to ensure all required machines are included in the inventory
- A "Detect" operation of your networked estate to collate all required information
- A detailed deliverable report that includes:
    - A current inventory of your installed AVEVA Software
    - A detailed explanation of the currently supported versions and associated compatibility operating systems and SQL versions
    - Highlighted risks associated with your system in relation to the latest available software versions
    - Steps required to migrate currently deployed applications to the latest versions
    - Information on the latest features and functionality availability
- A training session covering how to use Software Asset Manager and work with your site's data
- A post-implementation report detailing activities
