WIN-911 Implementation

WIN-911 is the most widely used alarm notification platform in industrial settings and has been a long-time partner of Wonderware Midwest. If you want to increase the reliability of alarm notification, operational efficiency and insight into common errors or maintenance requirements while reducing downtime and the number of staff required, then WIN-911 used in combination with an InTouch HMI, Edge, or AVEVA System Platform alarm system would be a great fit for you.

$8,000

Our AVEVA Select professional services team has worked with the implementation of WIN-911 on top of an AVEVA alarm system for many years. Our team uses best practices to ensure the connection to your AVEVA alarm system (InTouch HMI, InTouch Edge or System Platform) is set up and working properly and that your notifications on WIN-911 are set up and working properly.

What's Included

- Installation and configuration of WIN-911 software on a single physical or virtual machine

- Connection of WIN-911 to your existing InTouch HMI, Edge or System Platform environment

- Configuration of Grandstream Device for telephony options (if required)

- Configuration of WIN-911 environment tailored to your needs: including scheduling, messaging and notification options and types (phone, email, pager, text)

- Functional testing of solution

- Architecture and implementation documentation
