

System Health Review

Reaching and maintaining peak performance of your automation system is a continuous process. AVEVA's System Health Review is designed to help you get the most out of your AVEVA applications and related systems, increasing your return on investment and providing you with confidence in your plant operations.

\$12,000

Ensuring that your AVEVA system continues to run at peak performance year after year will help to reduce downtime and ensure that you get the maximum return on your software and hardware investments. Our System Health Review provides you with our AVEVA Select certified technical resources to access your current AVEVA system and its operating performance. Our experts will identify any areas of potential concern and work with you to correct these areas to return your system back to optimal performance.

What's Included

- Data collection from the implementation including:
 - Infrastructure and architecture information (hardware, OS, licensing, version information, ancillary software)
 - Health indicator information
 - Relevant log files (AVEVA software, OS, MS SQL, etc.)
- Review and analysis of data collected
- Resolution of identified issues - your AVEVA Select technical expert will work with you to resolve issues impacting your system performance
- A full report detailing our findings and laying out any issues, resolutions and recommendations going forward to ensure the continued health and performance of your AVEVA system
