

Sentinel System Monitor Implementation

Sentinel System Monitor is an on-premise application installed at your plant that continuously monitors your AVEVA Applications and system hardware, identifies upset conditions and immediately alerts you via email to potential issues before they can turn into application errors or downtime events.

\$3,200

Our AVEVA Select certified technical experts will provide a turn-key service that helps you proactively minimize downtime and reduce risk by ensuring that you have a verified installation of Sentinel System Monitor running at your site and that all identified machines are actively being monitored. Your key staff will also learn how to operate and utilize Sentinel System Monitor to maintain and monitor the system going forward.

What's Included

- A single Sentinel System Manager installation
- Installation of the Sentinel Agent to all machines that require monitoring
- Installation of the Sentinel license
- Configuration of Sentinel System Manager users
- Training session with key staff for hand-off of the solution
- Installation report
