

Pre-commissioning Consulting

This comprehensive offering is performed by one of our AVEVA Select certified technical experts with extensive product knowledge and will help minimize costs related to rework or customization and enhance planning capabilities and reduce risk of non-compatibility.

\$11,000

Pre-commissioning consulting provides you with the confidence that your system is ready for a trouble-free commissioning and production system cutover. The review takes place prior to the official commissioning of an AVEVA software implementation or upgrade. It helps confirm functional capabilities and identify any potential issues before being integrated into your specific environment that impairs system performance or stability. Recommendations will be provided for improvement actions, if necessary, prior to commissioning.

What's Included

- Review your information, production environment and commissioning plan
- Assess and verify system configuration and sizing and performance parameters
- Status review of punch list items including Factory Acceptance Test deficiencies
- Identification of unnecessary files, data and user accounts
- Confirm archive and backup schedules are configured properly and activated
